CLFMI GUIDE FOR SPECIFYING COMMERCIAL, INDUSTRIAL, AND SECURITY

CHAIN LINK FENCE AND GATES (Contract Section 32 31 13)
(Note: For a copy of this specification in Word format please contact CLFMI Headquarters)
CHAIN LINK FENCE MANUFACTURERS INSTITUTE PRODUCT MANUAL

(CLFGI-PM 2445)

The purpose of this manual is to provide chain link fence technical information for general knowledge, system design or the development of a commercial/industrial/security chain link fence specification.

HOW TO USE THE CLFGI PRODUCT MANUAL

a. Familiarize yourself with the content of the CLFGI product manual.

b. The product manual includes drawings of the four standard chain link fence designs plus swing gate, cantilever slide gate and fitting/assembly details.

c. Review the different chain link fabric configurations and gauges to ensure the best selection of the mesh size and wire gauge for the application.

d. Prior to designing a security fence system review the CLFGI “Security Fencing Recommendations SFR2445”.

e. Select the type of fabric for the application; galvanized (ASTM A392), aluminum coated (ASTM A491), zinc -5% mischmetal alloy (ASTM F1345) or polymer coated (ASTMF668).

f. Review the framework Dimensions and Strength Characteristics Table # 6 and Guide for Selection of Line Post, Table # 7 to select the post that best suits the application, (ASTM F1043 and ASTM F1083). Make sure to take into consideration wind load particularly if the fence is 8 ft. high or greater using 1 in. mesh or less. Use the CLFGI “Chain Link Fence Wind Load Guide for the Selection of Line Post and Line Post Spacing WLG2445” for a fence requiring a structural framework design due to wind load.

g. For polymer coated fabric or systems choose an ASTM color from ASTM F934.

h. Thoroughly review and understand the chain link ASTM standards; those reference above as well as; chain link terminology (F552), fittings and tie wire (F626), barbed wire (A121 and F665), barbed tape (F1910 and F1911) tension/coil spring wire (A824 and F1644), swing gates (F900), horizontal slide gates (F1184), automated vehicular gates (F2200), and chain link installation (F567).

i. The CLFGI manual includes a CSI formatted chain link fence specification, “Commercial, Industrial and Security Chain Link Fence and Gates, Section 32 31 13” for use in designing and specifying a chain link fence system.

j. For light industrial/commercial applications select framework from ASTM F1043 Table 4 “Summary of Requirements for Light Industrial/Commercial Fence Framework”.

k. All phases of chain link fence installation are covered in detail within the Specification 32 31 13, Part 3.
DESCRIPTION OF TERMS

A short list of descriptive terms: (See ASTM F552, “Standard Terminology Relating to Chain Link Fencing” for a complete list.)

a. Chain link fabric – A fencing material consisting of wire helically wound and interwoven in such a manner as to provide a continuous mesh without knots or ties except in the form of knuckling or twisting at the top and bottom of the mesh to form the fabric selvage.

b. Selvage-The top and bottom edge finish on woven chain link formed by joining adjacent pairs of wire pickets. The selvage may be knuckled or twisted.

c. Knuckled selvage* refers to bending the adjacent pairs of wire back into a tight loop.

d. Twisted selvage* refers to twisting the adjacent pairs of wire together in a close helix of 1 ½ machine turns, which is equivalent to three full twists.

e. Mesh size – The minimum clear distance between the wires forming the parallel sides of the mesh.

f. Terminal post – A post to which the chain link fabric is terminated using specific fittings; end post, corner post, gate post and pull post (a terminal post used to accommodate a grade or placed at intervals on long stretches of fence).

g. Line post- Intermediate posts set no greater than 10 feet on center between the terminal posts.

h. See drawing Typical Fence Section for details of various fence fittings; tension bar, truss rod, tension band, brace band, rail end and barb arm.

1.4 SUBMITTALS

A. Shop drawings: Site plan showing layout of fence location with dimensions, location of gates and opening size, cleared area, elevation of fence and gates, details of attachments and footings.

B. Certifications: Manufacturers material certifications in compliance with current ASTM specifications.

C. Domestic certifications: Material certifications, Made in U.S.A., Buy American Act or Buy America when required.

D. Specification Changes: May not be made after the date of bid.

1.5 QUALITY ASSURANCE

A. Manufacturer: Company operating in the United States having U.S. manufacturing facility/facilities specializing in manufacturing chain link fence products with at least 5 years experience.

B. Fence contractor: Company with demonstrated successful experience installing similar projects and products in accordance with ASTM F567 and have at least 5 years experience.

1.6 DELIVERY, STORAGE AND HANDLING

A. Delivery: Deliver products to site per contract requirements.

B. Storage: Store and protect products off the ground when required.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Framework, posts, rails, pipe for gates: [list selected CLFMI manufacturers]

B. Fabric, fittings, gates and accessories: [list selected CLFMI manufacturers]

2.2 CHAIN LINK FABRIC

A. Steel Chain Link Fabric: __in. mesh, __gauge ___ high per ASTM____, top selavage__ bottom selavage__ [List height or heights] [select ASTM coating specification designation and Class, mesh size and wire gauge (see Table 1), top/bottom selavage and color when applicable] [delete fabric specifications not selected] <Steel chain link mesh sizes and gauges are produced in one-piece widths 3 feet (910 mm) to 12 feet (3660 mm). Custom order fabric is available in heights up to and including 20 ft. (6.1m).>

1. Zinc-Coated Steel Fabric: ASTM A392 hot dipped galvanized before or after weaving.
   a. Class 1 - 1.2 oz/ft² (366 g/m²)
   b. Class 2 - 2.0 oz/ft² (610 g/m²) [available 9 and 6 gauge]
2. Aluminum–Coated Steel Fabric (Aluminized): ASTM A491
3. Zinc-5% Aluminum-Mischmetal Alloy Coated Steel Fabric: ASTM F1345
   a. Class 1 – 0.6 oz/ft² (183 g/m²)
   b. Class 2 – 1.0 oz/ft² (305 g/m²)
4. Polymer Coated Steel Fabric: ASTM F668, the wire gauge specified for polymer-coated wire is that of the metallic coated steel core wire
   a. Class 1 extruded
   b. Class 2a extruded and adhered
   c. Class 2b fused and adhered
   d. Color: [dark green] [olive green] [brown] [black] in compliance with ASTM F934
5. Fabric selvage:
   Standard fabric selvage for 2 in (50 mm) mesh 72 in. (1.8 m) high and over is knuckle finish at one end, twist at the other, K&T.
   Fabric less than 72 in (1.8 m), knuckle finish top and bottom, K&K.
[Specify K&K for added safety for playfield and park applications]  
Mesh sizes less than 2 in. (50 mm) have a knuckle selvage for both top and bottom, K&K.

**See CLFMI Product Manual Tables for complete listing of mesh sizes and gauges

2.3 STEEL FENCE FRAMEWORK

A. Round steel pipe and rail: ASTM F1043 Group IA Heavy Industrial Fence Framework, schedule 40 galvanized pipe per ASTM F1083. Exterior hot dipped zinc coating minimum average 1.8 oz/ft², interior hot dipped zinc coating minimum average 1.8 oz/ft².  <specify 2.0 oz/ft² zinc coating when applicable>

<Select and specify steel yield strength Grade> Regular Grade or High Strength Grade.

1. Line post: [Refer to Table 2] <Insert outside diameter and weight>
2. End, Corner, Pull post: [Refer to Table 2] <Insert outside diameter and weight>
3. Top, brace, bottom and intermediate rails, 1.660 in. (42.2 mm) OD, 2.27 lb/ft [3.38 kg/m]

B. Round steel pipe and rail: ASTM F1043 Group IC Heavy Industrial Fence Framework.  <Select and specify galvanized after forming or galvanized before forming>

Galvanized after forming: Exterior zinc coating minimum average 0.90 oz/ft² and an interior 81% nominal zinc pigmented 0.30 mil coating.

Galvanized before forming: Exterior zinc coating minimum average 0.90 oz/ft² and an interior zinc coating minimum average 0.90 oz/ft².

1. Line post: [Refer to Table 2] <Insert, outside diameter and weight>
2. End, Corner, Pull post: [Refer Table 2] <Insert outside diameter and weight>
3. Top, brace, bottom and intermediate rails, 1.660 in. (42.2 mm) OD, 1.84 lb/ft [2.74 kg/m]
C. Rolled-Formed line posts and rail: ASTM F1043 Group II Heavy Industrial Fence Framework. Zinc coating minimum average 2.0 oz/ft².
   1. Line post dimensions: [Refer to Table 2] <insert size dimensions and weight>
   2. Top, brace, bottom and intermediate rails: 1.625 x 1.25 in. (41.2 x 31.7 mm), 1.35 lb/ft (2.01kg/m).
   [1.660 in (42.2 mm) OD round pipe rail can be used with the rolled formed post] <
   select ASTM F1043 Group IA or IC rail >

[When specifying light industrial/commercial fence refer to ASTM F1043 Light Industrial/Commercial Fence Framework; Rolled formed posts Group II-L, and Alternate posts Group IV-L.]
TABLE 2 Line post selection guideline
Minimum post size based on 2” 9 gauge mesh, 105 mph wind speed, Category B, no icing. Consult the CLFMI “Chain Link Fence Wind Load Guide for the Selection of Line Post and Line Post Spacing (WLG 2445)”
Group IA F1083, schedule 40 pipe reflects Regular Grade 30,000 psi yield steel, High Strength Grade, 50,000 psi yield steel not listed.
Pipe terminal posts are generally one size larger in outside diameter than the line posts.

D. Polymer Coated Framework: Polymer coated framework shall have a [PVC] [Polyolefin] [Polyester] coating fused and adhered to the exterior zinc coating of the post or rail. PVC and polyolefin coatings shall have minimum thickness 10-mils (0.254 mm), polyester coating minimum thickness 3 mils (0.0076 mm) per ASTM F1043. Color to match fabric [dark green] [olive green] [brown] [black] per ASTM F934.
2.4 TENSION WIRE

A. Metallic Coated Steel Marcelled Tension Wire: 7 gauge (0.177 in.) (4.50 mm) marcelled wire complying with ASTM A824 [Match coating type to that of the chain link fabric] <Insert metallic coating Type and class when applicable>
   1. Type I Aluminum-Coated (Aluminized) 0.40 oz/ft² (122 g/m²)
   2. Type II Zinc-Coated Class 4 - 1.2 oz/ft² (366 g/m²)
   3. Type II Zinc-Coated Class 5 - 2.0 oz/ft² (610 g/m²)
   4. Type III Zinc-5% Aluminum-Mischmetal Alloy Coated Steel Fabric Class 1 – 0.6 oz/ft² (183 g/m²) Class 2 - 1.0 oz/ft² (305 g/m²)

B. Polymer Coated Steel Tension Wire: 7 gauge (0.177 in.) (4.50 mm) wire complying with ASTM F1664. Wire gauge specified is the core wire gauge. [Match coating class and color to that of the chain link fabric] <Insert material coating class and color>
   1. Class 1, extruded
   2. Class 2a, extruded and adhered
   3. Class 2b, fused and adhered,

2.5 BARBED WIRE

A. Metallic Coated Steel Barbed Wire: Comply with ASTM A121, Design Number 12-4-5-14R, double 12-½ gauge (0.099 in.) (2.51 mm) twisted strand wire, with 4 point 14 gauge (0.080 in.) (2.03 mm) round barbs spaced 5 inches (127 mm) on center. Match coating type to that of the chain link fabric. <Insert material coating specification including type and class when applicable>
   1. Coating Type A - Aluminum-Coated (Aluminized): Strand wire coating Type A - 0.30 oz/ft² (90 g/m²) with aluminum alloy barbs.
   2. Coating Type Z - Zinc-coated: Strand wire coating Type Z, Class 3, 0.80 oz/ft² (254 g/m²), barb coating 0.70 oz/ft² (215g/m²)

B. Polymer Coated Barbed Wire: Comply with ASTM F1665, 0.80 in (2.03 mm) double twisted strand wire; zinc coated four point, 14 gauge (0.080 in.) (2.03 mm) barbs spaced 5 inches (127 mm) on center [Match strand wire coating class and color to the chain link fabric] [Barbs are not polymer coated] <Insert strand wire Class coating and color>
   1. Class 1, extruded
   2. Class 2a, extruded and adhered
   3. Class 2b fused and adhered
2.6 BARBED TAPE

Stainless Steel Long Barbed Tape: Comply with ASTM F1910. [Based on the security level required select the design configuration from the table listed in ASTM F1910] [Insert description, barbed tape material, coil diameter, core wire gauge and material when applicable, barb clusters per loop, coil loops, coil loop spacing, coil length, attachment points]

2.7 FITTINGS

A. Tension and Brace Bands: Galvanized pressed steel complying with ASTM F626, minimum steel thickness of 12 gauge (0.105 in.) (2.67 mm), minimum width of 3/4 in. (19 mm) and minimum zinc coating of 1.20 oz/ft² (366 g/m²). [Bands supplied with 5/16 in. (7.94 mm) or 3/8 in. (9.53 mm) galvanized steel carriage bolts]

B. Terminal Post Caps, Line Post Loop Tops, Rail and Brace Ends, Boulevard Clamps, Rail Sleeves: In compliance to ASTM F626, pressed steel galvanized after fabrication having a minimum zinc coating of 1.20 oz/ft² (366 g/m²).

C. Truss Rod Assembly: In compliance with ASTM F626, 3/8 in. (9.53 mm) diameter steel truss rod with a pressed steel tightener, minimum zinc coating of 1.2 oz/ft² (366 g/m²), assembly capable of withstanding a tension of 2,000 lbs. (970 kg).

D. Tension Bars: In compliance with ASTM F626. Galvanized steel one-piece length 2 in. (50 mm) less than the fabric height. Minimum zinc coating 1.2 oz./ft² (366 g/m²). [Select bar size]
   1. Bars for 2 in. (50 mm) and 1 ¾ in. (44 mm) mesh shall have a minimum cross section of 3/16 in. (4.8 mm) by 3/4 in. (19 mm).
   2. Bars for 1 in. (25 mm) mesh shall have a cross section of 1/4 in. (6.4 mm) by 3/8 in. (9.5 mm).
   3. Bars for small mesh 3/8 in. (10 mm), 1/2 in. (13 mm) and 5/8 in. (16 mm) shall be attached (sandwiched) to the terminal post using a galvanized steel strap having a minimum cross section of 2 in. (51 mm) by 3/16 in. (4.8 mm) with holes spaced 15 in. (381 mm) on center to accommodate 5/16 in. (7.9 mm) carriage bolts which are to be thru bolted thru the strap the mesh and thru the terminal post.

E. Barbed Wire Arms: In compliance with ASTM F626, pressed steel galvanized after fabrication, minimum zinc coating of 1.20 oz./ft² (366 g/m²), capable of supporting a vertical 250 lb (113 kg) load. [Type I – three strand 45 degree (0.785 rad) arm]
   [Type II – three strand vertical arm] [Type III - V shaped six strand arm]

F. Polymer Coated Color Fittings: In compliance with ASTM F626. Polymer coating minimum thickness 0.006 in. (0.152 mm) fused and adhered to zinc coated fittings [Match color to fence system]
2.8 TIE WIRe and HOG RINGS

Tie wire and hogs rings per ASTM F626. [Standard applications: 9 gauge (0.148 in.) (3.76 mm) aluminum alloy ties, 9 gauge (0.148 in.) (3.76 mm) aluminum alloy hog rings] [Applications requiring added security: 9 gauge (0.148 in.) (3.76 mm) galvanized steel preformed power-fastened wire ties, 9 gauge (0.148 in.) (3.76 mm) galvanized steel hog rings. Minimum zinc coating 1.20 oz/ft² (366 g/m²).] [polymer coated; match the coating, class and color to that of the chain link fabric]

2.9 SWING GATES

A. Swing Gates: [single] [double] ___ opening ___ by ___ ft. high. Galvanized steel welded fabrication in compliance with ASTM F900. Gate frame members 1.900 in. OD (48.3 mm) <insert pipe specification> [ASTM F1043 Group IA ASTM F1083 schedule 40 pipe] [ASTM F1043 Group IC pipe] Frame members spaced no greater than 8 ft. (2440 mm) apart vertically and horizontally. Welded joints protected by applying zinc-rich paint in accordance with ASTM Practice A780. Positive locking gate latch fabricated of 5/16 in. (7.9 mm) thick by 1 ¾” (44.45 mm) pressed steel galvanized after fabrication. Galvanized malleable iron or heavy gauge pressed steel post and frame hinges. Match gate fabric to that of the fence system. Gateposts ___OD, ___ lb/ft [ASTM F1043 Group IA ASTM F1083 schedule 40 pipe] [ASTM F1043 Group IC pipe] <Insert outside diameter, specification reference and weight> [Select the gatepost outside diameter from table 2.9 B] [Polymer coated gate frames and gateposts; match the coating type and color to that specified for the fence framework. Moveable parts such as hinges, latches and drop rods may be field coated using a liquid polymer touch up] [electrically operated gates must comply with ASTM F2200 and UL325]

[Swing gate post size per ASTM F900]

2.10 HORIZONTAL SLIDE GATES

A. Overhead Slide Gates: In compliance with ASTM F1184 Type I.
Gate framing to be of welded construction, minimum 1.900 in. OD (48.3 mm) pipe members. <Insert pipe specifications> [ASTM F1043 Group IA ASTM F 1083 sch 40 pipe] [ASTM F1043 Group IC pipe] Framing members to be spaced no more than 8 ft. (2440 mm) apart horizontally and vertically. Welded joints are to be protected by applying zinc-rich paint in accordance with ASTM Practice A780. Positive locking latch, 5/16 in. (7.9 mm) thick by 1 ¾ in. (44.45 mm) pressed steel, galvanized after fabrication. Galvanized steel drop bars to be provided with double gates. Chain link fabric to match the fence system. Manufacturer’s standard overhead beam/structure, track, rollers and accessories designed to support the load of the gate panel taking into consideration wind load and possible icing. The support beam/structure to be galvanized or receive proper corrosion protection. Gateposts to be OD lb/ft <Insert post size & weight per ft> Post size for gate openings up to and including 10 ft. (3.05 m) shall be 2.875 in OD (73 mm) Openings greater than 10 ft. (3.05 m) up to 24 ft. (7.3 m) shall be 4.000 in. OD (101.6 mm) Openings greater than 24 ft. (7.3 m) up to 40 ft. (12.2 m) shall be double 4.000 in. OD (101.6 mm) in compliance with <Insert pipe specification> [ASTM F1043 Group IA ASTM F1083 schedule 40 pipe] [ASTM F1043 Group IC pipe].

B. Cantilever Slide Gates: In compliance with ASTM F1184 Type II

1. Class 1-External Roller Design: Horizontal top and bottom steel pipe “track” members to be 2.375 in. OD (60.3 mm), vertical and internal members 1.900 in. O.D. in compliance with <Insert gate pipe frame specification> [ASTM F1043 Group IA ASTM F 1083 sch 40 pipe] [ASTM F1043 Group IC pipe]. Gate frame to be fabricated by welding, vertical and horizontal members located no greater than 8 ft. (2440 mm) apart. The length of back frame support section shall be a minimum of 40% of the opening. Welded joints are to be protected by applying zinc-rich paint in accordance with ASTM Practice A780. Gates designed to open or close by applying an initial pull force no greater 40 lbs. (18.14 kg). Match chain link fabric to that of the fence system. Positive locking latch fabricated galvanized pressed steel. Galvanized steel drop bars provided with double gates. Gateposts, 4.000 in. OD (101.6 mm) lb/ft <Insert post specification & weight per ft> [ASTM F1043 Group IA ASTM F1083 sch 40 pipe] [ASTM F1043 Group IC pipe]. Provide safety protective guards for the top and bottom external rollers.
2. Class 2-Internal Roller Design: Select material: [aluminum alloy extrusion] [ASTM F 1043 Group IA, ASTM F 1083 schedule 40 pipe] [ASTM F 1043 Group IC pipe] Gate frame fabricated by welding, vertical and horizontal members located no greater than 8 ft. (2440 mm) apart. The length of back frame support section shall be a minimum of 40% of the opening. Class 2 cantilever slide gates to comply with the performance deflection criteria listed in ASTM F1184. Gates designed to open or close by applying an initial pull force no greater than 40 lbs. (18.14 kg). Internal truck assemblies designed to handle the forces required for gate size opening and height. Match chain link fabric to that of the fence system. Gateposts, 4.000 in. O.D. (106.1 mm) \_\_lb/ft <Insert post specification & weight per ft> [ASTM F1043 Group IA ASTM F1083 schedule 40 pipe] [ASTM F1043 Group IC pipe].

[Internal roller cantilever designs vary by manufacturer and material]
a. [Steel Pipe Frame Design: Match the specification of Class 1 cantilever slide gate. Securely bolt an extruded aluminum enclosed track designed to accommodate internal roller assemblies to the top horizontal member]
b. [Aluminum Frame Design: Aluminum rectangular members of various shapes and wall thickness per manufacturers design based on gate opening and height. Top horizontal member to be one-piece extruded section having an integral internal track to accommodate truck assemblies.]

C. [Polymer coated horizontal slide gates and posts shall match the coating type and color as that specified for the fence framework.] <Insert coating requirement and color>

D. [Electrically operated gates and accessories must be manufactured and installed to comply with the safety requirements of ASTM F2200 and UL 325]

2.11 CONCRETE

Concrete for post footings shall have a 28-day compressive strength of 2,500 psi. (17.2 MPa).
PART 3 EXECUTION

3.1 CLEARING FENCE LINE

Clearing: Surveying, clearing, grubbing, grading and removal of debris for the fence line or any required clear areas adjacent to the fence. [Surveying, clearing, grubbing, grading and removal of debris for the fence line or any required clear areas adjacent to the fence is included in the earthwork contractor’s contract under the provisions of Division 31 - Earthwork.] [Surveying, clearing, grubbing, grading and removal of debris for the fence line or any required clear areas adjacent to the fence is not included in the earthwork contractor’s contract and is the responsibility of the fence contractor in accordance with the provisions of Division 31 - Earthwork.] The contract drawings indicate the extent of the area to be cleared and grubbed.

3.2 FRAMEWORK INSTALLATION

A. Posts: Posts shall be set plumb in concrete footings in accordance with ASTM F567. Minimum footing depth, 24 in. (609.6 mm) plus an additional 3 in. (76.2 mm) for each 1 ft. (305 mm) increase in the fence height over 4 ft. (1220 mm). Minimum footing diameter four times the largest cross section of the post up to 4.00” (101.6mm) O.D. and three times the largest cross section of post greater than 4.00” (101.6mm). O.D. Gate posts require larger footings; minimum requirements are listed in ASTM F567. [Site soil conditions, local frost depth, fence height and wind load may require larger diameter or deeper footings] Top of post concrete footing to be [at grade] 6 inches (152 mm) below grade. <Insert footing grade requirement> crowned to shed water away from the post. Line posts installed at intervals not exceeding 10 ft. (3.05 m) on center.

B. Top rail: When specified, install 21 ft. (6.4 m) lengths of rail continuous thru the line post or barb arm loop top. Splice rail using top rail sleeves minimum 6 in. (152 mm) long. [If specifying F1043 light industrial/commercial framework swedged rail may be used in lieu of sleeves] The rail shall be secured to the terminal post by a brace band and rail end. Bottom rail or intermediate rail shall be field cut and secured to the line posts using boulevard bands or rail ends and brace bands. [Fences 12 feet (3.66 m) high or higher require mid rail]

C. Terminal posts: End, corner, pull and gate posts shall be braced and trussed for fence 6 ft. (1.8 m) and higher and for fences 5 ft. (1.5 m) in height not having a top rail. The horizontal brace rail and diagonal truss rod shall be installed in accordance with ASTM F567.
D. Tension wire: Shall be installed 4 in. (101.6 mm) up from the bottom of the fabric. Fences without top rail shall have a tension wire installed 4 in. (101.6 mm) down from the top of the fabric. Tension wire to be stretched taut, independently and prior to the fabric, between the terminal posts and secured to the terminal post using a brace band. Secure the tension wire to the chain link fabric with a 9 gauge hog rings 18 in. (457.2 mm) on center and to each line post with a tie wire. [Install the top tension wire through the barb arm loop for fences having barbed wire and no top rail.]

3.3 CHAIN LINK FABRIC INSTALLATION

Chain Link Fabric: Install fabric to [outside] [inside] of the framework. Attach fabric to the terminal post by threading the tension bar through the fabric; secure the tension bar to the terminal post with tension bands and 5/16 in. (7.94 mm) carriage bolts spaced no greater than 12 inches (304.8mm) on center. Small mesh fabric less than 1 in. (25 mm), attach to terminal post by sandwiching the mesh between the post and a vertical 2 in. wide (50mm) by 3/16 in. (4.76 mm) steel bar using carriage bolts, thru bolted thru the bar, mesh and post spaced 15 in. (381 mm) on center. Chain link fabric to be stretched taut free of sag. Fabric to be secured to the line post with tie wires spaced no greater than 12 inches (304.8 mm) on center and to rail spaced no greater than 18 inches (457.2 mm) on center. Secure fabric to the tension wire with hog rings spaced no greater than 18 inches (457.2 mm) apart. <Insert method of securing tie wire> [Pre-formed 9 gauge galvanized steel power-fastened tie wire shall be wrapped 360 degrees around the post or rail and fabric picket, twist the two wire ends together three full turns per ASTM F567] [Aluminum alloy wire ties shall be wrapped around the post or rail and attached to a fabric wire picket on each side of the post or rail by twisting the tie wire around the fabric wire picket two full turns per ASTM F567.] Excess wire shall be cut off and bent over to prevent injury. The installed fabric shall have a ground clearance on no more than 2 inches (50 mm).

3.4 BARBED WIRE INSTALLATION

Barbed Wire: Stretched taut between terminal posts and secured in the slots provided on the line post barb arms. Attach each strand of barbed wire to the terminal post using a brace band. [Indicate type of barb arm, Type I, II or III and direction [inward] [outward] for installation of Type I arm.]

3.5 GATE INSTALLATION

A. Swing Gates: Installation of swing gates and gateposts in compliance with ASTM F567. Direction of swing shall be [inward] [outward]. Gates shall be plumb in the closed position having a bottom clearance of 3 in. (76 mm) grade permitting. Hinge and latch offset opening space from the gate frame to the post shall be no greater than 3 in. (76 mm) in the closed position. Double gate drop bar receivers shall be
set in a concrete footing minimum 6 in. (152 mm) diameter 24 in. (609.6 mm) deep. Gate leaf holdbacks shall be installed for all double gates. [Electrically operated gates and accessories must be manufactured and installed in compliance with ASTM F2200 and UL 325.]

B. Horizontal Slide Gates: Installation varies by design and manufacturer, install according to manufacturers instructions and in accordance with ASTM F567. Gates shall be plum in the closed position, installed to slide with an initial pull force no greater than 40 lbs. (18.14 kg). Double gate drop bar receivers to be installed in a concrete footing minimum 6 in. (152 mm) diameter, 24 in. (609.6 mm) deep. Roller guards and guide posts must be installed on Type I external roller cantilever slide gate in compliance with ASTM F1184. Ground clearance shall be 3 in. (76 mm), grade permitting. [Electrically operated gates and accessories must be manufactured and installed in compliance with ASTM F2200 and UL 325]

3.6 BARBED TAPE INSTALLATION

Barbed Tape: Barbed tape when specified shall be installed in accordance with ASTM F1911, installation of barbed tape.

3.7 NUTS AND BOLTS

Bolts: Carriage bolts used for fittings shall be installed with the head on the secure side of the fence. All bolts shall be peened over to prevent removal of the nut.

3.8 ELECTRICAL GROUNDING

Grounding: Grounding of the fence and gates is not the responsibility of the fence contractor and not included in the fencing scope of work for this contract. Grounding, when required, shall be specified and included in Contract Section 33 79 00. A licensed electrical contractor shall install grounding.

3.9 CLEAN UP

Clean Up: The area of the fence line shall be left neat and free of any debris caused by the installation of the fence.

END OF SECTION 32 31 13
